Quantum Computing launches quantum software application for financial institutions

Quantum Computing Inc (OTCMKTS:QUBT) has released its first-ever software application: The Quantum Asset Allocator.

The Quantum Asset Allocator is built to help financial institutions solve asset allocation problems. The software is available as both a cloud-based software service and as an on-premises software plus hardware system.

"This is a major breakthrough for Quantum Computing," CEO Robert Liscouski said in a statement. "We are excited to be releasing the Quantum Asset Allocator which will provide small and medium sized funds the ability to do asset allocation that previously was the province of large brokerage firms, mutual fund and the largest quant funds. Beta tests have demonstrated superior portfolio performance using quantum inspired techniques on both classical and existing quantum computing hardware."

The software is able to leverage a financial institution's strategy for evaluating risk and reward and calculate the optimal portfolio mix.

"Quantum Computing develops and sells quantum-ready software solutions for clients who have problems that can be solved using quantum techniques to provide superior results on classical computers today," said Steve Reinhardt, who is the vice president of Product Development at Quantum Computing.

"This is the launch of our first of a series of products that will leverage quantum techniques to provide differentiated performance on both classical computers and on a variety of early-stage quantum computers such as DWave and other annealers, which are on the market today," he added.

Staffed by experts in mathematics, quantum physics, supercomputing, financing and cryptography, Leesburg, Virginia-based Quantum Computing is developing an array of applications to allow companies to exploit the power of quantum computing to their advantage.

The company is placing a gargantuan bet on the power of quantum computers to solve the most difficult and intractable problems in the fields of portfolio management, big data and artificial intelligence.

Company Synopsis:

Quantum Computing Inc. focuses on developing and commercializing quantum computing hardware and application services. It is developing quantum annealer, a simulator that helps in solving problems that existing supercomputers cannot solve, which are primarily used in finance, cyber security, and medicine applications. The company was formerly known as Innovative Beverage Group Holdings, Inc.
