Colluli Potash Project
Positively Unique
Globally Unrivalled
The 10Gs of Colluli

Paul Donaldson, Managing Director
Proactive Investors Presentation
February 2017
Forward looking statements and disclaimer

The information in this presentation is published to inform you about Danakali Limited (the “Company” or “DNK”) and its activities. DNK has endeavoured to ensure that the information enclosed is accurate at the time of release, and that it accurately reflects the Company's intentions. All statements in this presentation, other than statements of historical facts, that address future production, project development, reserve or resource potential, exploration drilling, exploitation activities, corporate transactions and events or developments that the Company expects to occur, are forward-looking statements. Although the Company believes the expectations expressed in such statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in forward-looking statements.

Factors that could cause actual results to differ materially from those in forward-looking statements include market prices of potash and, exploitation and exploration successes, capital and operating costs, changes in project parameters as plans continue to be evaluated, continued availability of capital and financing and general economic, market or business conditions, as well as those factors disclosed in the Company's filed documents.

There can be no assurance that the development of the Colluli Project will proceed as planned. Accordingly, readers should not place undue reliance on forward looking information. Mineral Resources and Ore Reserves have been reported according to the JORC Code, 2012 Edition. To the extent permitted by law, the Company accepts no responsibility or liability for any losses or damages of any kind arising out of the use of any information contained in this presentation. Recipients should make their own enquiries in relation to any investment decisions.

Mineral Resource, Ore Reserve and financial assumptions made in this presentation are consistent with assumptions detailed in the Company’s ASX announcements dated 25 February 2015, 4 March 2015, 19 May 2015, 23 September 2015, 30 November 2015, 15 August 2016 and 1 February 2017 which continue to apply and have not materially changed. The Company is not aware of any new information or data that materially affects assumptions made.

Colluli carries all the key ingredients for a successful development
The 10G’s of Colluli

COLLULI IS UNMATCHED WHEN IT COMES TO THE KEY INGREDIENTS OF A SUCCESSFUL DEVELOPMENT

1. Grade
2. Geology
3. Geometry
4. Geography
5. Gross margin
6. Growth potential
7. Global significance
8. Government support
9. Game changing potential
10. Gains for local and regional communities
1. Grade: Colluli is a **premium grade** SOP resource with very low Waste to Product ratio

- Colluli one of the highest grade SOP deposits in the world\(^1\)
- Very high potassium content and **very low** waste to product (W:P) ratios
- A broad quality range exists in potassium brines – brines are not the same
- Higher W:P ratio brines typically require **higher evaporation rates**, large capital intensive evaporation ponds and high volumes of waste salt management

---

1. Colluli DFS mine plan - Colluli waste includes all overburden (clastics, rock salt) and salt extracted in processing operations
2. BC Insight Fertiliser Magazine
3. Waste calculated from total dissolved solids (TDS) data on company websites (sum of all salts in brine less SOP product). Brine waste associated with trenching has been excluded from the calculation (favouring a lower waste to product ratio to the greenfield brine projects). Potassium yields of 70% assumed for brines.
Superior grade negates the need for large, costly ponds, giving industry leading capital intensity

Potassium salts mined from Colluli have a potassium concentration approximately 25x that of potassium rich brines

A potassium rich brine on a weight basis has similar potassium concentration to a banana

Colluli’s ponds are:
- Up to 160x smaller than potassium brines in Utah (poor evaporation conditions)
- Up to 32x smaller than potassium brines in Australia (reasonable evaporation conditions)
- Up to 20x smaller than potassium brines in Chile and the Middle East (good evaporation conditions)
- Up to 4x smaller than solution mines

Kilograms of potassium per tonne

Pond size (km$^2$) for SOP projects [normalised for 425ktpa SOP production rate$^1$]

Capital expenditure and intensity increase with pond size

Colluli salts have the lowest evaporation pond requirements

- Utah
- Australia
- Chile and the Middle East
- Solution mining

5. Handbook of lithium and natural calcium chloride
6. Financial Times
7. Arab Potash website
8. Investor presentation 2012
9. EPM Mining prefeasibility study
10. Great Salt Lake Minerals website
11. Calculated from Colluli resource data and published brine compositions
12. Salt Lake Potash website
13. United States department of agriculture
2. Geology: The right salts in the right form

COLLULI IS THE ONLY SOP DEPOSIT THAT ALLOWS EXTRACTION OF POTASSIUM SALTS IN SOLID FORM

• Colluli has the RIGHT combination of potassium salts for high yield, ambient temperature conversion to SOP
  • The Colluli combination of sylvite and kainite is the most favourable path to SOP from primary resources and the most commonly used
  • The absence of sylvite (kainite only) requires high energy input (50°C), low yield crystallisation\(^1\)\(^2\)

• Colluli is the ONLY SOP resource that allows extraction of salts in solid form
  • Extraction of salts in solid form significantly improves production reliability (not weather dependent versus potassium rich brines) and reduces capital intensity (need for large evaporation ponds negated)

• Plant feed rates and grade are stable and predictable
• Production rates not weather dependent
• Other salts in the resource have monetisation potential
  • Magnesium Sulphate, Magnesium Chloride, Rock Salt, and Gypsum all have established markets

\(^1\) Potash, Garret, P, pp441 – 445
\(^2\) Reward Minerals Presentation, 2013
3. Geometry: Shallow, Simple, Easy access

**COLLULI IS THE SHALLOWEST EVAPORITE DEPOSIT IN THE WORLD**

1. **Shallow mineralisation**
   - Commencing at just 16m and allowing open cut mining
   - Open cut mining is a proven, safer, simpler, high productivity mining method that gives superior resource to reserve conversion rates compared to underground or solution mining alternatives.

2. **Ease of access**
   - Flat
   - Free dig of upper layers
   - No clearing
   - No local inhabitants

3. **Shallow inclination**
   - Resource slopes only 1°
   - Highly suitable for surface miners

4. **Layered**
   1. Predictable, reliable production
   2. Predictable grade
   3. Ease of selective extraction of potassium salts
Geometry: Simple extraction

LAYERED, SOLID SALT, OPEN PITTABLE RESOURCE MAKES FOR A STRAIGHTFORWARD MINING PROCESS

Source: Danakali
4. Geography: The epicentre of global population growth and the closest SOP deposit to a coastline globally

**COLULLI IS LOCATED AT THE EPICENTRE OF BOOMING POPULATION GROWTH IN AFRICA AND ASIA**

- Potash is a rare commodity story where demand is not primarily China-driven
- Colluli is geographically superior with regard to key growth markets and has logistical superiority in the Danakil basin

**Historical and forecast global population growth (billions)**

Colluli has a central position with respect to major population growth regions
5. Gross Margin: Low operating costs and premium product give superior margins

Sources:
Potash prices (standard product): Greenmarkets prices at 14 Apr 16 – Priced for SOP NW Europe (US$540), SOP Eastern China (US$540), SOP Utah (US$640), MOP Vancouver (US$300)
Operating costs: Company Websites, CRU, Integer Research, DNK Analysis
Margins: DNK Analysis
6. Growth potential: 1.1b tonne ore reserve, low incremental growth capital and diverse range of salts

**COLLULI DEMONSTRATES EXCEPTIONALLY LOW GROWTH CAPITAL AND IS UNDERPINNED BY A MASSIVE ORE RESERVE**

**Massive Growth Potential:**
- Capital intensity of Phase II is exceptionally low at US$411/tonne
- Colluli contains over 300 million tonnes of high quality rock salt that will be mined to access the potassium salts
- Colluli contains over 85 million tonnes of kieserite (magnesium sulphate) which is used as fertilised for magnesium deficient soil
- Colluli contains appreciable amounts of gypsum and magnesium chloride which have monetisation potential

*Source: DNK Company announcements, Company websites*
7. Global significance: Most advanced, fundable SOP project in the world with the most attractive economics

COLLULI DOMINATES OTHER PROJECTS WITH RESPECT TO VALUATION OUTCOMES

1 In accordance with CMSC Shareholders Agreement
2 Third party debt estimated at 60% of project funding

Source: DNK Company announcements, Company websites
8. Government support: A key project enabler

DNK AND ENAMCO ARE ADVANCING A WORLD CLASS POTASH PROJECT

Government support and strategic alliance

- Eritrea is a stable jurisdiction with a rapidly emerging mining industry.
- Danakali has a strong, effective working relationship with the Government through its joint venture.
- Agreement with the Eritrean National Mining Corporation (ENAMCO).
  - ENAMCO and Danakali each hold a 50% ownership in the Colluli Mining Share Company.
  - Project Development Costs for initial development will be funded by up to 70% debt and 30% equity.
  - The CMSC board was established following the incorporation of CMSC in March 2014. The board is overseeing the project development.
  - CMSC has a board of 5, with 3 members from Danakali and 2 from ENAMCO.

The structure allows Government direct insight into the mining industry, which is an important part of Eritrea’s development.
9. Game changing potential: Cost curve position, and low growth capital mean significant future growth

**COLLULI HAS THE POTENTIAL TO DISPLACE A CONSIDERABLE AMOUNT OF THE CURRENT SOP SUPPLY**

**Scale of Colluli is truly world class**

**Bottom quartile cost position protects margins**

Ex-works cash costs for SOP production (US$/t)

- Bottom quartile cost position
- Provides insulation in the event of a SOP price decline
- Anticipated rock salt production (which would otherwise be overburden) to further reduce cash costs

Opportunity for Colluli to displace high cost secondary supply

Source: Company websites, Potash Corp annual report, CRU Research, EPM Mining presentation 2014, Integer Research
10. Gains for local and regional communities

CREATION OF EMPLOYMENT OPPORTUNITIES, SKILLS DEVELOPMENT AND CAREERS PATHS FOR ERITREAN NATIONALS

Colluli will create over 300 permanent jobs for locals and Eritrean nationals by 2019, and over 450 by 2025.

Expectations for Eritrean employee numbers at Colluli

- Regional employees
- National employees

Colluli will create over 300 permanent jobs for locals and Eritrean nationals by 2019, and over 450 by 2025.
Colluli – there is only one

- Colluli is **the most attractive and advanced stage primary SOP production project in the world**
- SOP is a **high quality, chloride free potash** with **limited economically exploitable primary resources**
- The project has the **key ingredients for a successful, high quality development** that will deliver superior returns
- The resource demonstrates **superior grade, geography, geology, geometry, gross margin and growth potential**
- Low growth capital, bottom quartile cost curve position, resource size and monetisation potential of other salts means Colluli has the potential **to change the global SOP supply landscape**
- Joint Venture partnership is a **key enabler**
- **Mining agreement and licenses have been awarded**, offtake and funding discussions are progressing
Colluli - Positively Unique
Competent persons statement

Resource statement

The 2015 Colluli Potash Mineral Resource is reported according to the JORC Code and estimated at 1,289Mt @11% K2O Equiv. The Mineral Resource is classed as 303Mt @ 11% K2O Equiv Measured, 951Mt @ 11% K2O Equiv Indicated and 35Mt @ 10% K2O Equiv Inferred. The Competent Person for this estimate is Mr. Stephen Halabura, M. Sc., P. Geo., Fellow of Engineers Canada (Hon), Fellow of Geoscientists Canada, and a geologist with over 25 years’ experience in the potash mining industry. Mr. Halabura is a member of the Association of Professional Engineers and Geoscientists of Saskatchewan, a Recognised Professional Organisation (RPO) under the JORC Code and has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the JORC Code.

The 2015 Colluli Rock Salt Mineral Resource is reported according to the JORC Code and estimated at 347Mt @96.9% NaCl. The Mineral Resource is classed as 28Mt @ 97.2% NaCl Measured, 180Mt @ 96.6% NaCl Indicated and 139Mt @ 97.2% NaCl Inferred. The Competent Person for this estimate is Mr. John Tyrrell, a geologist with more than 25 years’ experience in the field of Mineral Resource estimation. Mr Tyrrell is a member of the AusIMM, is a full time employee of AMC Consultants Pty Ltd and has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the JORC Code.

Mr. Tyrell & Mr. Halabura consent to the inclusion of information relating to the Mineral Resource Statements in the form and context in which they appear.

Ore Reserve statement

The November 2015 Colluli Ore Reserve is reported according to the JORC Code and estimated at 1,113Mt @10% K2O Equiv. The Ore Reserve is classed as 286Mt @ 11% K2O Equiv Proved and 827Mt @ 10% K2O Equiv Probable. The Competent Person for the estimate is Mr Mark Chesher, a mining engineer with more than 30 years’ experience in the mining industry. Mr. Chesher is a Fellow of the AusIMM, a Chartered Professional, a full-time employee of AMC Consultants Pty Ltd, and has sufficient open pit mining activity experience relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the JORC Code. Mr Chesher consents to the inclusion of information relating to the Ore Reserve in the form and context in which it appears.

In reporting the Mineral Resources and Ore Reserves referred to in this public release, AMC Consultants Pty Ltd acted as an independent party, has no interest in the outcome of the Colluli Project and has no business relationship with Danakali Ltd other than undertaking those individual technical consulting assignments as engaged, and being paid according to standard per diem rates with reimbursement for out-of-pocket expenses. Therefore, AMC Consultants Pty Ltd and the Competent Persons believe that there is no conflict of interest in undertaking the assignments which are the subject of the statements.

<sup>1</sup> Danakali DFS 30 November 2015  
<sup>2</sup> ASX Announcement 25 July 2016  
<sup>3</sup> ASX Announcement 1<sup>st</sup> February 2017
SOP demand will increase by over 30% over the next decade

**SOP IS A MULTI-NUTRIENT FERTILISER ESSENTIAL FOR HIGH VALUE, CHLORIDE INTOLERANT CROPS**

- A significant increase in global SOP consumption is forecast
  
- 33% increase in demand for high value fruit and vegetables till 2050
  
- Colluli is well positioned as an advanced stage project to take advantage of global growth

---

1. CRU
2. IC Potash
3. FAO
LACK OF ATTRACTIVE PRIMARY PRODUCTION PROJECTS REQUIRES INCREASED HIGH COST SUPPLY TO MEET DEMAND

- Lack of attractive primary SOP projects requires additional secondary production to meet growing demand - high cost secondary production requires thermal conversion of sulphuric acid and potassium chloride to produce sulphate of potash (SOP)
- Acid management, storage and disposal cause ongoing challenges for secondary producers, adding to conversion costs
- Secondary producers create a high price floor for primary producers who will continue to enjoy high margins

% SOP from secondary production

![Chart showing increasing SOP supply from high cost, secondary production creates ongoing price support.](chart.png)
Large, low cost, long life resource close to established infrastructure

Close proximity to established infrastructure

- Bitumised and all weather road runs to within 40km of Colluli site

Well established export facility

- Port of Massawa
- 6 berths
- Bulk and container shipping capability
- Storage area allocated for Colluli product

3. Massawa Port
Simple, energy efficient, commercially proven technology WITH THE BEST COMBINATION OF SALTS

PRODUCTION OF SOP FROM COLLULI SALTS OCCURS WITH SIMPLE PROCESSES INCLUDING FLOTATION, MIXING AND DRYING

**Simple processing** – Crush – Float – Mix – Dry - Truck

Colluli contains **the right combination of potassium salts** for ambient temperature conversion to SOP

- The combination of sylvite and kainite is ideal for ambient temperature, high yield conversion to SOP
- No thermal decomposition required
- Heated brines typically achieve potassium yield 10% to 15% lower than ambient conversion
Colluli continues to positively advance

Front End Engineering and Design (FEED) Initiated
• Globally recognised, highly reputable, multi-national construction and engineering company, Fluor have been appointed to lead the FEED and optimisation process
• Global Potash Solutions, Knight Piésold and Elemental Engineering appointed to FEED team
• Optimisation workshops underway with focus on capital and operating cost reduction

Offtake Discussions Well Progressed
• MOUs now converting to Heads of Agreement
• High level commercial terms outlined
• Continued high level of interest in product offtake

Mining Agreement and Mining License
• DFS submitted to Ministry of Energy and Mines
• SEIA approved in December
• Mining agreement and license discussions have been progressing over the past few months and are nearing completion
Nevsun Resources – Case study
Cumulative Capex Spend > US$600m
Shareholder dividend > US$100m

Nevsun market capitalisation compared to commodities performances

Capex invested by Nevsun into Bisha mine and dividend paid to shareholders
